

SQL JOIN

- In order to join two or more tables you need to have a common column.
- Joining tables give us the ability to select any column between the tables that have been joined together.
- The tables joined become one table.
- Joins affect the rows - columns not affected.

INNER JOIN

- Returns the rows that are matching in both tables

Students

Students id	Name
1	Ayanda
2	Kabelo
3	Zanele

Course

Course id	Student id	Course
201	1	Maths
202	1	Science
203	4	English

SELECT columns (s)

FROM table1 AS A

INNER JOIN table2 AS B

ON A.common_column = B.common_column

SELECT Student id,

Name,

Course

FROM Student AS A

INNER JOIN course AS B

ON A.student id = B.student id ;

Student id	Name	Course
1	Ayanda	Maths
3	Zanele	Science
