Results

Curro . Students . maths - marks

→ SELECT DISTINCT (Different values in that column)
from database . Schema . table - name

Lesson 2

SQL Filtering Statement

Where statement

- It allows us to specify condition in order to filter rows in our table
- We are filtering the rows

NB, We filter the columns using the select statement
We filter the rows using the where statement

Syntax : SELECT Column 1, Column 2, Column 3, Column 4, } on the last column before the from statement you don't put comma
