

Set address = "New road, Gauteng"
 Where id = 1;

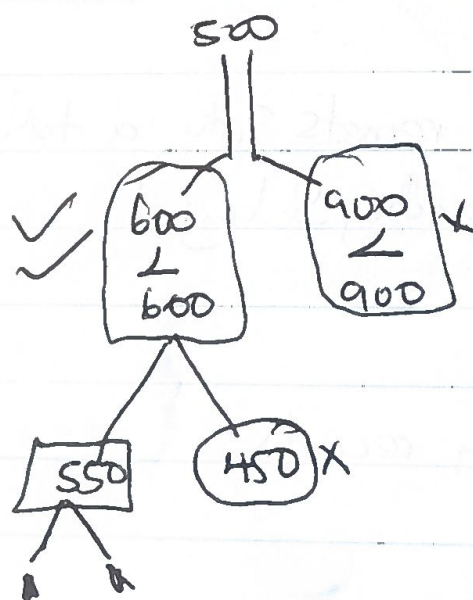

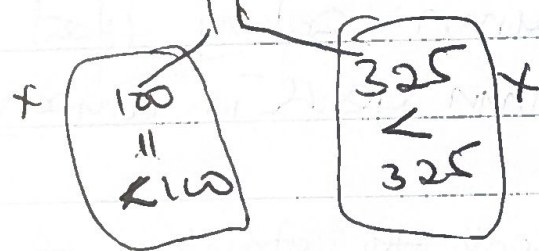

② Delete : used to remove records from tables
 Where is very important
 Delete from employees
 Where id = 3;

Indexes

- Separate, sorted structure that lets the engine jump to row without scanning everything

No Index (full scan)	With index (jump to row)
----------------------	--------------------------

In Database we have (indexes)
 B-Tree { customer_id < 500, from 10 million

we continue breaking it down until we get the actual value
