

Define once and use it like a normal table

Basic Syntax
with CTE_name as (
Select columns
From
Where
)

Select *
From CTE_Name
Where;

Single CTE

Example : Avg spend per product

only where Avg above 300

with product_averages as (
Select product,
Avg (total_spend) as avg_spend
from customer
Group by products
)

Select product, avg_spend
from product_averages
where Avg_spend > 300;

Select product, avg_spend

from product_averages

where Avg_spend > 300;

from product_averages

where Avg_spend > 300;

Chaining 2 CTEs

- You define multiple CTEs
- Separate them with a comma
- Can reference the CTEs defined before it
- Only on with at the beginning
