

3/06/2020 Pandas

Google colab

- It's a python library that we use for data processing
- We use it to analyze and manipulate data.

Importing Libraries

```
import pandas as pd # Data Manipulation  
import numpy as np # mathematical calculations
```

Data Ingestion

`data_path`

`df.columns`

columns: shows all the column names that we have on the datasets.

`df.dtypes` tells us that the data type in each and every column.

`int` - is a whole number, number without decimals

`Object` - is a string which is a combination of characters

#

→ Shows all the information from the dataset.

`df.info()`

→ Shows us the null values in our dataset

`df.isnull()`

→ Calculate the number of the null values in each column

`df.isnull().sum`

`df.shape`

Shows the number of rows and the number of columns

`df`
