

This code is to check the number of unique patient in my data

```
df['Patient ID'].unique()
```

This is how to filter the data based on a specific column:

```
df[df['Age'] > 70]
```

Youtube video

```
import pandas as pd  
df = pd.read_csv("")  
df
```

→ Checking rows & columns:

```
df.shape
```

→ Check rows & columns and data types

```
df.info()
```

→ pd

```
pd.set_option('display.max_columns')
```

→ The meaning of each column:

```
Schema_df
```

→ Check the first 5 rows

```
df.head(5)
```

Check the last 5 rows

```
df.tail(5)
```
